The CAMAR® Leveling System

- Exclusively from Peter Meier, Inc., the CAMAR® Leveling System offers builders and installers distinct advantages over conventional cabinet and furniture construction.

Faster Installation

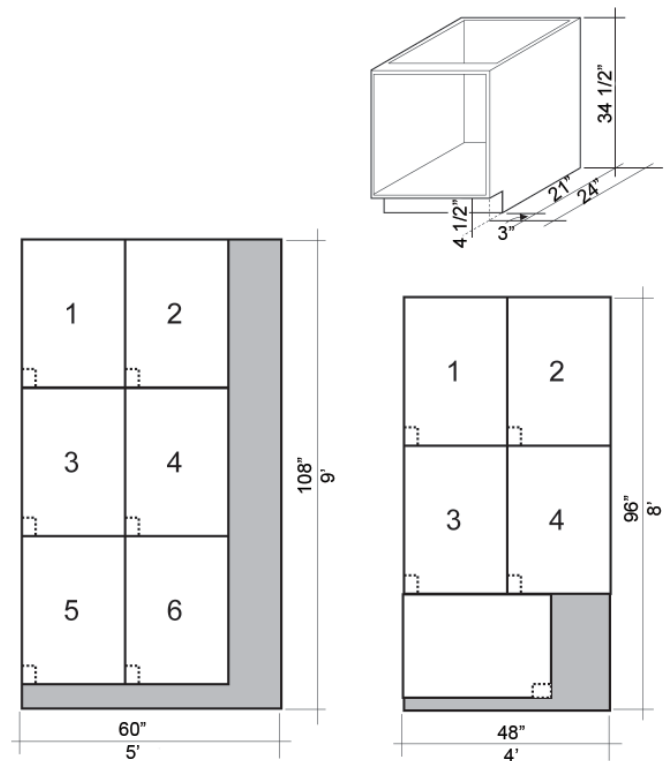

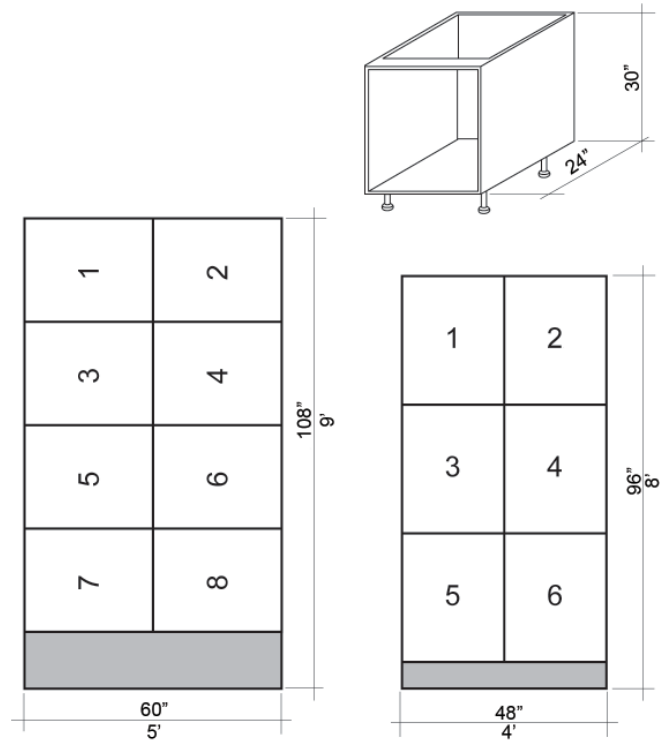

- Installation can be as much as 66 percent of a job's total cost. The CAMAR® System eliminates the need to toe notch the panels, saving an extra step and saving builders valuable time. With straight cuts, panels can be used for left or right placement, allowing for greater quality control.

More Efficient Use of Materials

- With no toe notches to cut, builders can use a uniform cutting pattern and get six panels out of a 4' x 8' panel instead of the conventional five. That's 20% more! Faster, easier and less handling required.

Higher Quality Installations

- With adjustable height control, the CAMAR® Leveling System ensures that cabinets are always level no matter what the slant of the floor below. No need for shimming and no problems with instability.

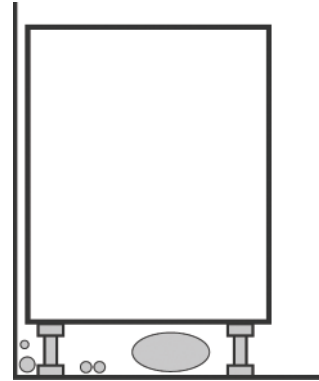

Easier for Builders

- Water pipes, electrical wiring, exhaust ducts and other plumbing can be easily installed under the cabinets.

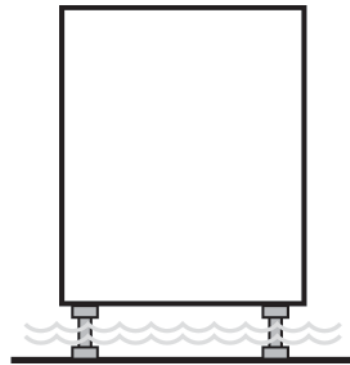

Completely Adjustable

- Cabinets and vanities can be built to a standard 30" and adjusted up to 33 5/8". Tall cabinets, including pantry and oven cabinets, can be adjusted 3 5/8" on site, to fit perfectly under soffits.

Prevents Water Damage

- Since the cabinets rest on the CAMAR® System Levelers and never directly touch the floor, they are protected from possible warping and water damage from flooding or mopping.

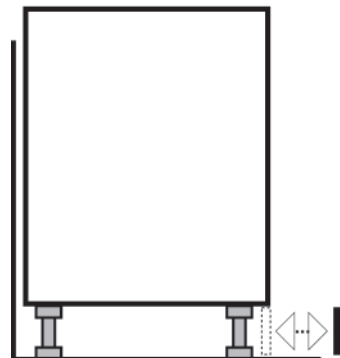

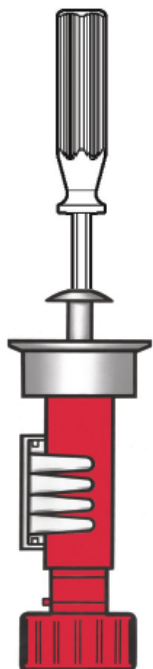

Saves on Shipping

- Since cabinets using the CAMAR® System Levelers have flat bottoms without a toe notch, more cabinets can be loaded into a truck – up to 12% more cabinets, in fact! That means saving 12% on shipping costs!

Versatile

- Easy to use under cabinets, vanities, even corner cabinets. Perfect for using in GARAGES!!!!

Cabinet Levelers

- Allow for precision adjustment of cabinetry
- All plastic levelers are made of virgin ABS which provides extra strength and stability
- Levelers feature a slight taper at the top, which ensures a tighter connection with the socket
- Metal levelers can be used with either metal or plastic sockets
- Plastic levelers can be used only with plastic sockets
- Height adjustment of levelers ranges from 3" to 9"
- 330 lbs. weight capacity per leveler

Screwdriver

- Sold separately

DESCRIPTION	ITEM NO.	LENGTH	MSRP
Screwdriver	810-25-G1	10" shaft	\$13.01

340 Metal Leveler

Flip-Flop Table Hinge for Table Top Applications

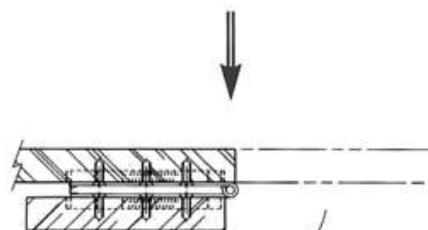

- Used to support a table leaf in the horizontal position.
- Strong spring assists to lift and lock leaf in level position with table top.
- Locks leaf underneath when not in use.
- Screws are not included.
- Converts square table to round table.
- Packed 1 each.

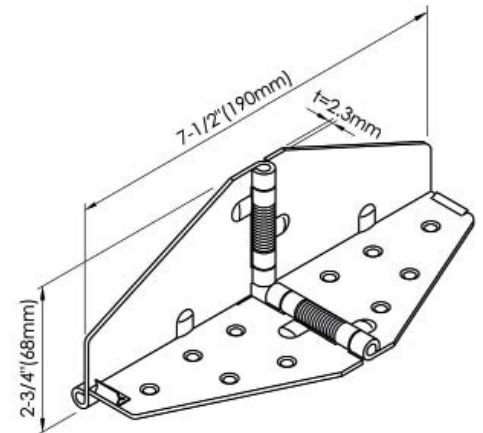

DESCRIPTION	ITEM NO.	MSRP
Flip-Flop Table Hinge	813-85-02	\$9.94

Open position (levelling)

Close position

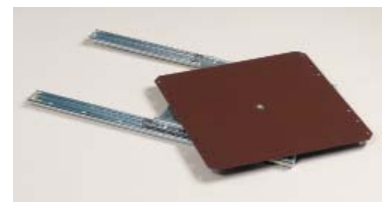

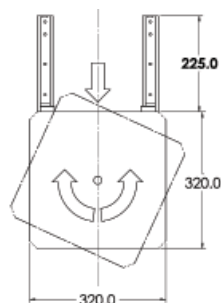

- May be used in restaurant applications. By flipping up a rounded table leaf, a square or rectangular table can be turned into a round table. Hinge can also be used on square or other shaped leaves. Also known as a 'Folding Leaf Hinge'.
- The leaf will fold back 180° under the table.
- Heavy duty built-in springs hold up the table leaf.
- Made of heavy gauge steel 2.3mm thick, with yellow zinc plating.
- Hinge is 7-1/2" x 5-1/4".
- Set of 2 hinges are needed per table leaf.
- Route 3/8" grooves to accommodate the under-side hinge pin.
- Install hinge with 5-1/4" side along table joint.
- We recommend using 10 each #8 flat head screws per hinge (not included).
- Use **CAUTION** when handling to avoid finger injury. Hinge is under constant spring tension.

Non-Slip Mats

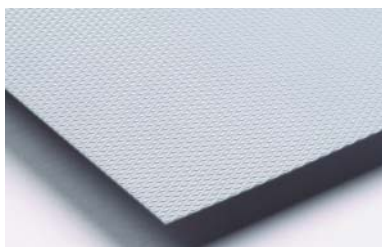

Non-Slip Mats

- Slip-resistant mats prevent stored items sliding around inside the cabinet
- Slip resistance guarantees maximum safety because the cut-to-size mat always stays in place
- Made of 100% recyclable polystyrene
- Safe for the food industry
- Natural rubber top layer seals in spilled liquids and prevents them from seeping through into the cabinet

Non-Slip Sheets, PRISMA Design

- Cut sheets available in **two standard sizes**:
500 x 915 mm (19-3/4" x 36")
534 x 915 mm (21" x 36")
- Material thickness: 1.4 mm (.05")
- Custom sizes available by special order
- Sold individually

Decorative Panels	87

Cabinet Components

79

TotalLight™

The exclusive solution for face-frame cabinet lighting

Supplied as a complete bottom panel assembly for new wall cabinets ready for finishing

Energy efficient LED lights are ideal for cabinets or furniture with glass doors

Shines light up into the cabinet and shines light down onto the countertop

Low voltage operation with plug-n-play connections mean simple installation

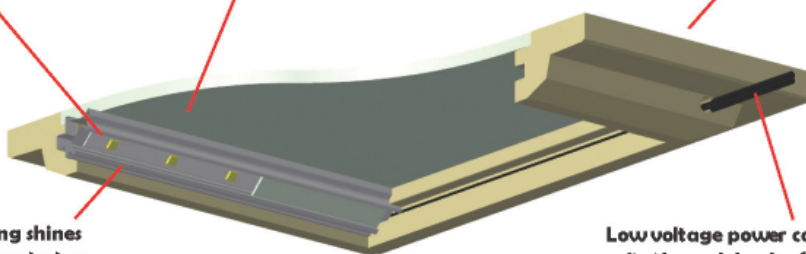

Aluminum light bar holds high output LED strip lighting

1/4" frosted acrylic center panel is illuminated by top lighting

Hardwood frame available in cherry, maple or red oak

Task lighting shines down on countertop

Low voltage power cord exits through back of frame

Patent Pending

Undercabinet lighting is a feature that most homeowners desire when planning a new or remodeled kitchen. Normally the lights are provided by the cabinet distributor or an electrician. The end result can vary from the choice of fixture to the ability of the installer.

With the Total Light & Cabinet concept, the dollar value and sales of the installation is transferred from the aftermarket / kitchen dealer / electrician to the kitchen cabinet producer.

The increased cost of cabinets with the Total Light solution installed in new home construction is mitigated by the cost of the cabinets being spread over the life of the mortgage.

When illuminating the interior of a cabinet with glass door fronts, fixtures are typically installed at the ceiling of the cabinet and the light must filter down through glass shelving. While lighted adjustable shelves with aluminum frames are now available to cabinet manufacturers, there has not been a solution that integrates lighting into a fixed panel that also functions as a cabinet component.

With Total Light, a stock cabinet bottom or top is replaced with a pre-wired assembly that is identical in length, width and thickness and can be easily installed on the assembly line.

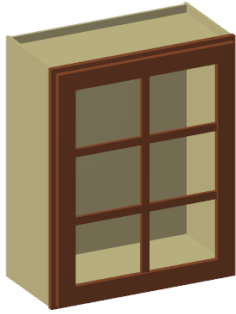

Total Light was designed specifically for face frame cabinets as there is space underneath and above for an assembly that houses LED strip lighting and translucent panels.

Illumination projects through the frosted acrylic to totally flood the areas above and beneath the cabinet bottom or cabinet top.

Each cabinet is supplied power through low, 12 volt wiring that connects to a main transformer that plugs into a standard 120 volt outlet. With normal installations an electrician is not required to make the wiring connections after the cabinets are installed.

The wiring can be routed underneath or on top of the cabinet. Wiring cabinets together is accomplished with various linking cables and terminal blocks. All electrical components are UL and CSA rated.

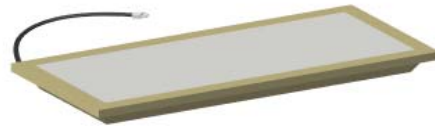

Total Light is patent pending

Your Cabinet

Total Light Cabinet Top

Total Light Cabinet Bottom

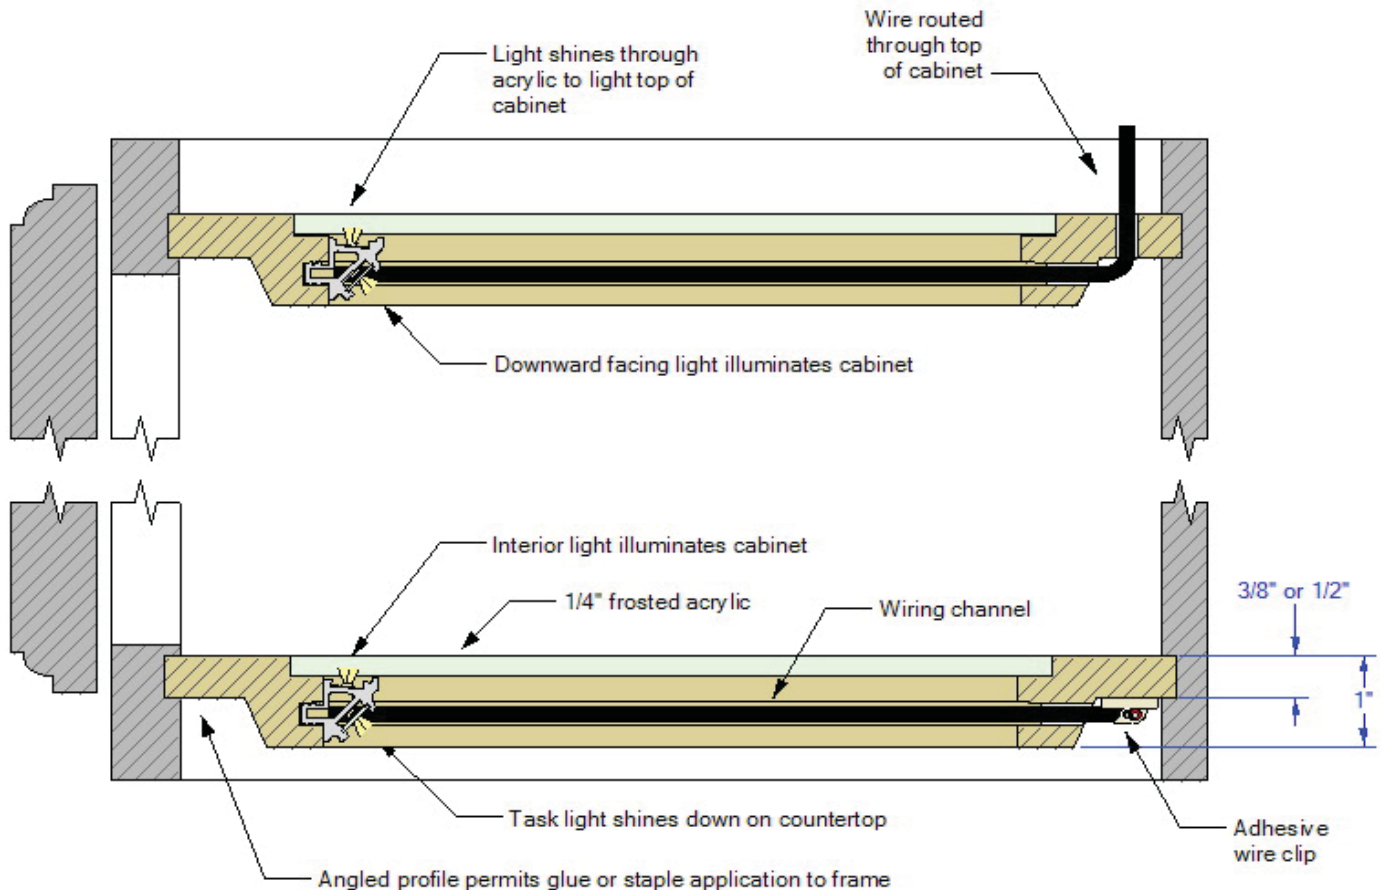

Transformer - Junction Blocks
- Link Cables - Dimmer Control

LED specifications:

- High Output 3 watt / 120 lumens per lineal foot
- 3500 Kelvin, warm white
- Rated at 50,000 hours useful life (23 years @ 6 hours per day)

Inside the Cabinet

Adjustable shelves are available, please inquire.

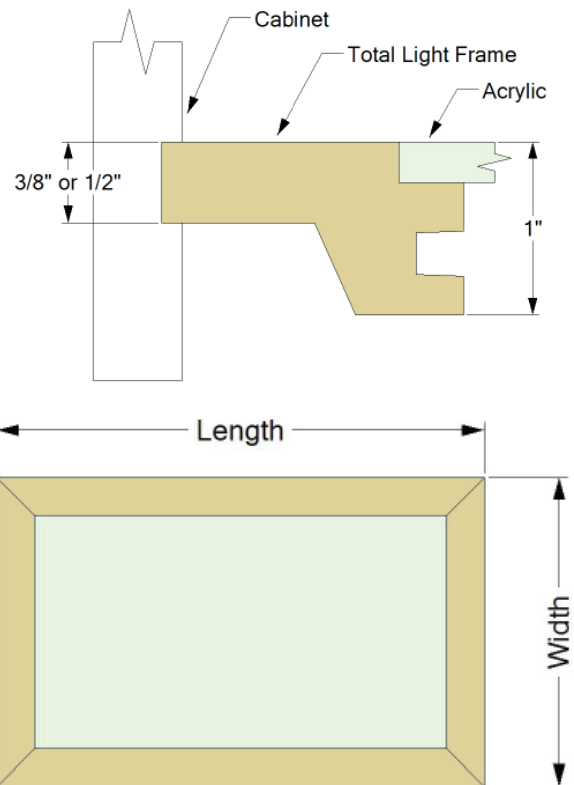

How to Specify

Order the same size as your existing Cabinet Bottom:

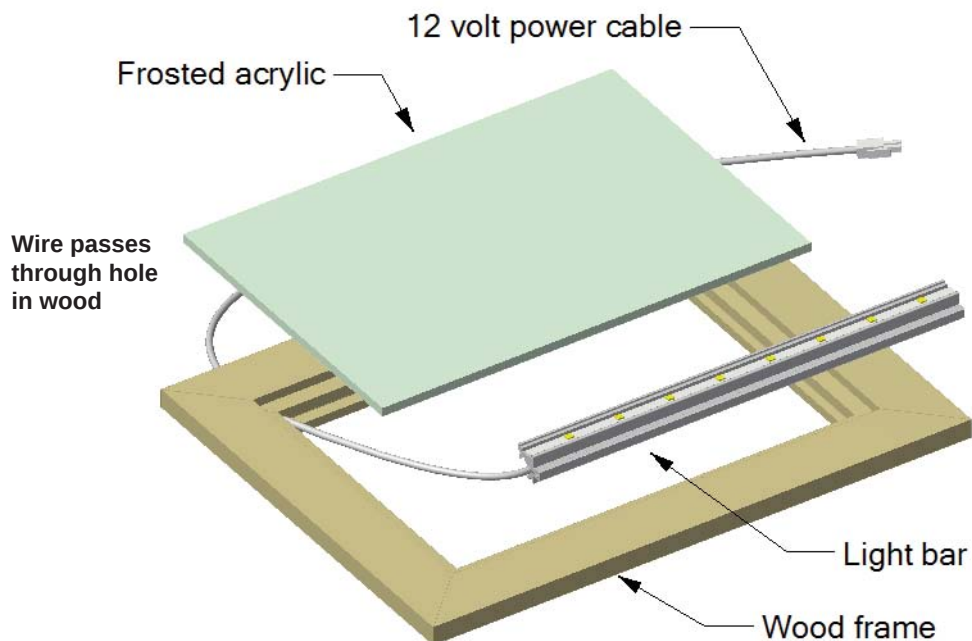

- *Length*
- *Depth*
- *Thickness* - frames are available for cabinets with 1/2" or 3/8" wide dados in the sides and back. The lip dimension 1/32" undersized.
- *Wood Species* - Maple, Cherry and Red Oak frames are offered in the stock program. Other species can be obtained in minimum quantities. Please contact your PMI Sales Rep for further information.

With this information your Total Light assembly can be constructed.

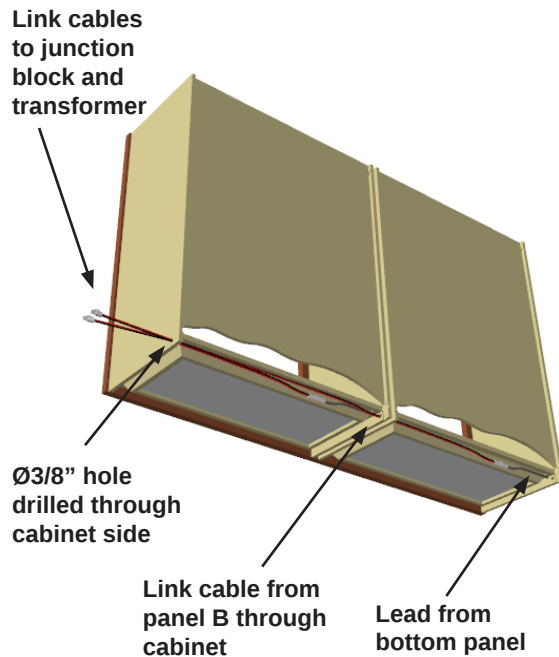

Order Forms with complete details are available, please inquire.

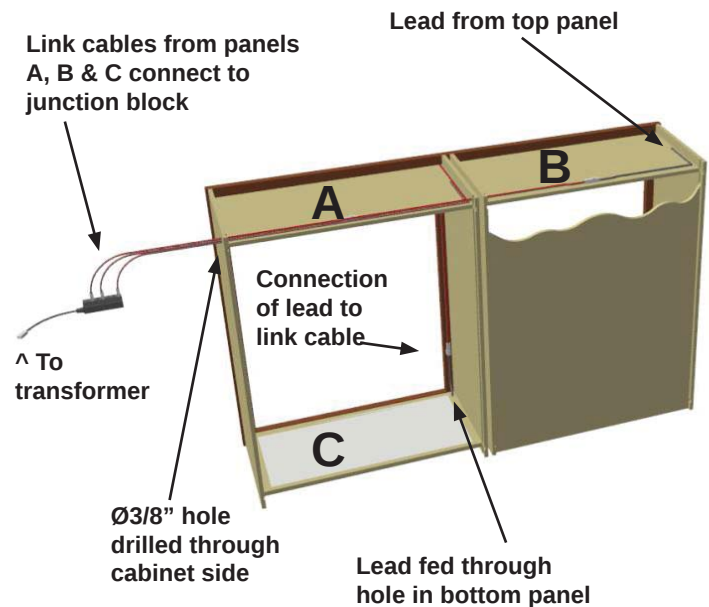

Servicable Light Assembly

Bottom Wiring

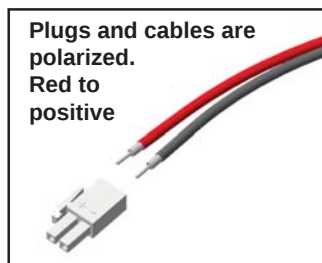

Top Wiring

Dimmer Controls

Dimmers for LED lighting are connected to the output (low voltage DC current) side of the transformer. Panel mount rotary dimmers or remote control dimmers are available.

Please call for pricing and availability.

Packaging

Acrylic is inserted into the frame.

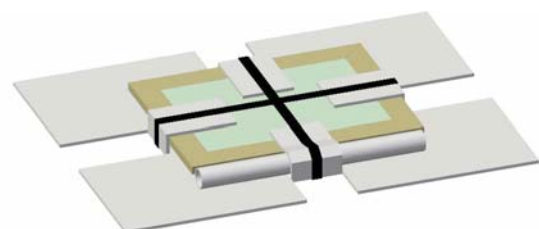

Light bar with wire is inserted into a cardboard tube.

A plastic bag with the plug end for the wire, (2) adhesive wire clips and the wire channel retainer will be taped to the TL assembly.

The frame, acrylic and light bar tube will have identifying code numbers to keep the set matched when they are separated.

The frame and tube are strapped to a cardboard sheet with a perimeter margin of 2"-3" for protection in shipping.

Up to 5 TL assemblies will go into a cardboard box.

Global Solutions

- PMI's global network of suppliers provides quality, on-time delivery and flexibility
- First Article Inspection ensures both manufacturer and end user understand product expectations
- In conjunction with our global suppliers, PMI offers:
 - **Quality Plan** - Visual and written specifications, drawings, measuring instruments and reports
 - **Specifications** for packaging and labeling
 - **Logistics coordination** in Asia and the U.S.
 - **Vendor-managed inventory**

Wood Components

- Top-grade wood products made according to strict quality standards
- Wood from mainland China and also Indonesia, Malaysia and Vietnam
- Wood Quality Specifications Book includes over 100 pages of guidelines, and addresses such issues as mineral, knots, rough cut and tear out
- Quality book created jointly by our Wood Components business unit in the U.S. and our Quality Control department in China
- Book available in both English and Chinese

Drawer Parts – Plywood, Solid Birch, Lumber Core

- **Species:** Birch
- **Face** - Grade A
- **Back** - Grade B
- Available finished or unfinished
- Groove or tenon machining
- **Sizes:** 12.7, 16 and 18mm
- Direct container load quantities

Please call for pricing
and availability.

Molding, Veneer Wrapped

- **Species:** Cherry, Hickory, Maple, Oak
- **Sizes:** Custom, some 8 foot lengths in stock
- **Grade:** Face-A, Back-C
- **Finish:** Unfinished
- Packed in bundles of 10 pieces
- Direct container load quantities

Please call for pricing
and availability.

Poplar Plywood Composite Panels

- Ideal for furniture, door and window frames, and cabinet manufacturing
- Available in direct container-load quantities only
- Various sizes and thicknesses available

Please call for pricing and availability.

Plywood

- **Species:** Cherry, Maple, Natural Birch, Oak, Okoume, White Birch
- **Sizes:** 5.2, 9, 12, 15, 18, 22, 25 mm, 4' x 8'
- **Grade:** Face-A, B, C; Back-1 or 2
- **Finish:** Unfinished or Clear

Please call for pricing and availability.

Decorative Architectural Panels

HTS of Dortmund, Germany manufactures these stylish decorative panels. Architects, planners, interior designers and furniture manufacturers will appreciate these high-quality panels which offer creative and ambitious solutions for furniture and room design. Combining flexibility and individuality, these surfaces allow for the highest level of customer satisfaction.

- Decorative Architectural Panels, available in a **wide variety of finishes such as wood, metal, faux leather and textiles**, and achieve high-impact results.
- **Wood finishes** (ribbed, latticed, embossed or woven) are raw, sanded and ready to be painted, stained or finished to the customer's needs.
- **Metal finishes** (woven or woven with wood) are clean and contemporary while faux leather finishes (ostrich, nappa or woven) provide a more exotic look.
- **Custom sizes** are available
- **Loose samples** are available, please inquire
- Direct container load quantities.
